Harbor Planning and Development
One First Avenue (Building 34)
Charlestown Navy Yard
Boston, MA 02129

Re: Harborwalk: Phase 1 Signage System

Dear Ms. Hadzipasic and Board Members:

Architects & Associated Designers, Inc. is pleased to submit our credentials for the above referenced project. As long time residents of the waterfront we are especially excited to see a project such as Harborwalk. Making the Harbor more accessible and negotiable by City residents and those that come to visit is an excellent addition to our environment. We want to be a part of this change!

It is our understanding that the BRA has prepared a Conceptual Plan of the Harborwalk project and requires a designer to provide Schematic Design, Design Development, and Construction Documents services; and later, Construction Administration as far as to observe the installation of any/all signs and kiosks. In addition, we would be available for any Construction Administration and additional services not called out for under the current Scope such as filing legal notices, pre-bid conferences, bidding, opening bids, and contract negotiations.

We have long been involved with urban edge and environmental design; helping to identify spaces and construct interpretive elements. Our past projects have included the large scale planning of 20 city blocks in Ontario, CA; and the mapping of 5,000 houses, over 90 square miles, to produce a 10'x14' map of the area detailing existing conditions for future improvements funded by HUD block grants.. However, Harborwalk is different because it affects us. Our offices have been on Fort Point Channel for ten years, and many of our staff members live and interact with the neighborhoods affected by this project: Charlestown, the North End, South Boston, and Dorchester. We are very familiar with the areas to be documented.

A&AD is ideally set up to produce this work for your office. Our consultant team includes Katherine McGuinness and Associates and Tod Cowan, Graphic Designer who will be instrumental to our provision of services. Ms. McGuinness is a highly regarded consultant in the field of accessibility design and has worked for a number of government agencies. We will use her talents to make Harborwalk signage accessible to all of it's visitors and provide sensitivity at actual sign and kiosk site locations. Mr. Cowan is a freelance graphic artist who has helped us prepare in house identity pieces. He is an experienced designer; produces excellent, comprehensible graphic images; and is knowledgeable about printing and typographic services.

We also have resources in exhibit and trade show industries for advice on fabrication and installation services for detailing and pricing. Our office, Ms. McGuinness, and Mr. Cowan use Macintosh computers for graphic design and production; we have in-house reduction and enlargement capabilities and accounts with most major reproduction houses for when the time comes to produce the actual working design.

Architects & Associated Designers, Inc. and it's consultant team would afford the City a concise, logical, well thought out solution to the unique design problems proposed in this exciting endeavor. We feel that our work along Harborwalk would benefit it's originators and those who would interact with it every day.

The credentials we present here hopefully will convince you to include us on your "shortlist" for interviews. We sincerely want to be selected to participate in the Harborwalk project.

Sincerely,

Architects & Associated Designers, Inc.

Robert C. Stickles, AIA, Principal
RCS:jko

History/Background

Architects & Associated Designers, Inc. has established itself as an architectural and planning firm structured to appropriately respond to the complex needs of today's organizations. We dedicate our efforts to afford our clients unique, programmatic solutions to their special, personalized problems *within* their particular budgets.

Since 1978 we have been offering complete A E services for feasibility studies, master planning, reports, construction documents, and construction administration. Our experience and expertise ranges from small scale residential and commercial projects to large scale governmental, institutional, and private sector projects in the housing, educational, judicial, recreational, and commercial/industrial marketplace. We take great pride in our work and in the way we work.

A&AD strongly believes that your project should be constructed the way it was conceived and developed with the expertise and attention it deserves. Our in-house system of organization and project management ensures that assignments will not be ignored or lost; and the details do not get overlooked for expediency. Regardless of size or scope of service, A&AD assigns senior staff to every project. This allows for prompt availability of key individuals and close client involvement through the entire design process.

The satisfaction of our efforts does not only come from praises of a job well done. Most importantly, it comes from the evolution of mutual and lasting friendships of well-satisfied, repeat clientele. A&AD wants you to know that you can look to us for all your building projects. Give us a call and find out how we can become your *lifelong* A E representative

Professionals in Complete A/E Services

A&AD offers a full range of comprehensive, professional services in architecture **and** engineering (A E). We retain engineering consultants selected from the most respected and highly qualified firms to supplement our own in-house capabilities. We believe this best serves our clients because we are able to match the experience, skills, and workload of each consultant with the specialized requirements of the project.

We will orchestrate the architectural and engineering issues inherent in all building projects from the Basic Services of Structural, Mechanical, and Electrical Engineering to those highly unique services of Geotechnical, Acoustical, and Illumination Engineering, as well as Industrial Hygiene. We believe our approach to complete coordination allows us to maintain quality control and the continuity of design desired between the interior and exterior concerns of a building.

A&AD believes in a healthy relationship between architect and engineer in the design process. We have earned a reputation for being strong leaders in cost conscious value engineering services. The A&AD team and its consultants work together to know every detail of the project from beginning to end. In this way we help ensure that program requirements are successfully met, and that the project remains on schedule and within budget.

Construction Options

The Bidding and Negotiation process for construction of a project is often referred to as "the moment of truth." This phase will determine if a project can proceed as planned, or if it has to go back to the drawing board.

When it comes time to select a builder or a general contractor for a project A&AD can be of invaluable assistance. We have a significant amount of experience and skill in the preparation of bid documents for both public and private bidding of construction. A&AD can provide sound recommendations on the means or options available for contractor selection.

Construction Options include open, competitive bidding, which allows all contractors to submit bids; invitational competitive bidding whereby certain selected contractors participate in closed submissions, or if in the interest of the project, a single bid may be negotiated. Whatever method is chosen, A&AD can help determine the best course of action to follow.

A&AD's construction administration services include observation of construction for compliance with contract documents, review of contractors' submittals and shop or fabrication drawings, processing of change orders, monitoring construction schedules, certification of payment applications, providing project closeout and final inspections, and assisting with start up and move-in activities.

Steps in the Process

Projects We Undertake: Specialization Groups People

Pre-Design Phase 1

The program will be defined, and the financial and time requirements will be established

Site Analysis Phase 2

This phase establishes site-related limitations and requirements of zoning or local ordinances.

Schematic Phase 3

During this phase drawings and other documents illustrating the general scope, scale and relationship of the project components will be developed

Design Development Phase 4

After schematics are approved, documents are created to fix and describe the size and character of the project, and appropriate elements are checked for availability and scheduling.

Construction Documents Phase 5

Upon approval of the overall design, construction documents consisting of drawings and technical specifications which specify the requirements of construction, bidding, and contracting for the project are prepared.

Bidding/Negotiations Phase 6

Assistance is provided to the Owner in obtaining bids or negotiated proposals, and in awarding and preparing contracts for construction.

Construction Administration Phase 7

During the entire phase of construction, all aspects of project administration including A/E or other consultant coordination, field observation services, and project closeout will be provided.

Post Construction Phase 8

When the structure is completed, the Owner will be assisted in the start-up operation and move-in of the facility

Supplemental Services Phase 9

These services may be used during one or more phases, and can include graphic design, energy studies, systems testing and production of promotional or leasing materials

A&AD is a *team* of highly qualified and dedicated architects having diverse practice in architectural design and engineering of civic and governmental facilities. We have earned a solid reputation for excellence in documentation and construction follow through.

In our efforts to provide the best services and refine our skill, the staff regularly attends lectures and seminars. We are in constant communication with the construction industry, and are up to date on the latest technology and materials available. A&AD is always ready to rise to the challenge of designing any type of building project, in any capacity.

We maintain strong, professional working relationships with some of the finest consultants in structural, HVAC, plumbing, electrical, geotechnical, acoustical, and illumination engineering. A&AD also has excellent associates in industrial hygiene, hazardous waste assessment, and environmental quality.

State Registrations

Principal members of A&AD hold a number of state registrations including the National Council of Architectural Registration Boards (NCARB) for reciprocity in all fifty states.

I. Approach to the Project

The development of a signage system for a project of such diverse characteristics as Harborwalk requires the study of many different visual elements from a variety of perspective viewpoints. It will require a working knowledge of the many other signage systems within the Boston area in order to integrate the new system with those currently in use. Studies will also need to be undertaken in order to evaluate signage systems which have been successful in other cities and areas of public gathering.

The successful team will need a thorough understanding of the diverse architectural styles and characteristics which permeate the City of Boston, particularly the waterfront areas. They must be capable of creating a recognizable signage system that will blend into the existing urban fabric of patterns and textures which link the various waterfront pieces with many other areas of the City.

The signage system will also require the knowledge of materials and construction technologies for application in a variety of settings of dramatically different scales and sizes, and offering a wide range of types and amounts of information.

To this end A&AD has assembled a professional team of experts from different backgrounds to address each of these visual elements from diverse viewpoints and historical perspectives.

- Richard Kattman, a Landscape Architect, will evaluate these elements in terms of the site conditions and open space context which might be anticipated
- Katherine McGuinness with expertise in planning for persons with disabilities, will ascertain that the signage elements communicate to all persons equally and effectively.
- Tod Cowan, as a graphic designer will insure that the elements are visually discernable and provide the required information in a clear and visually pleasing manner.
- Robert Stickles and David Winner with A&AD will evaluate the architectural characteristics of the visual elements and coordinate the efforts of the team into a coherent package of components oriented toward providing a continuously identifiable linkage along the Boston Waterfront.

II. Affirmative Action Statement

It has been the consistent policies of A&AD and its' consultants to employ people of all races, religions, colors, national origins, sexes and sexual orientations, in every job at all skill levels. In addition, the Team makes every effort to work with consultants who encourage diversity on their staff; Katerine McGuinness and Associates is a women owned business. In our many years of working with municipal and government agencies, this Team has consistently met or exceeded required guidelines for Affirmative Action and equal opportunity practices, and to date has yet to be refused work on a project for failure to meet lawful affirmative working practices.

III. Work with a Public Agency

Architects & Associated Designers, Inc. has successfully provided design services for numerous public agencies in the City of Boston, Commonwealth of Massachusetts, and at the Federal level for the Veterans Administration, Department of Defense, and the Federal Aviation Administration.

We have taken six jobs through to be Publicly Bid under Chapter 149 of the Massachusetts General Laws.

Also, we have developed good working relationships with the Project Managers assigned by each Awarding Authority, and have worked with them to consistently provide a finished project in line with the Client's program for the work, and within the anticipated budget.

g. Other Experience and Qualifications relevant to the proposed project

Mr. Stickles will serve as Project Director on the Harborwalk, Phase 1 Signage System project. He has provided design services for these and other types of signage systems for public and private agencies. His experience includes graphic design, siting, design implementation, and concise signage systems planning encompassing numerous buildings and locations.

He brings sixteen years of planning, design, and renovation experience to the job and has provided creative, cost efficient design solutions to many public and private clients. He has led architectural teams through design development, working drawings, and construction administration.

- Kiosk/Newsstand, Federal Reserve Bank, Boston, MA
- Tobacconist, Ltd., Faneuil Hall, Boston, MA
- ASTRA Guardhouse, Westborough, MA
- Abraham School, Exterior Site Planning, Boston, MA
- Corporate Identity Program, Keliher Group, Boston, MA
- Corporate Identity Program & Graphics, Rigoli, Co., Inc., Waltham, MA

g. Other Experience and Qualifications relevant to the proposed project:

Mr. Winner brings 12 years of project experience with 8 years at the Project Manager level. His responsibilities include scheduling staff, coordinating consultants, and working to establish and maintain budgets.

He has participated in the design of signage systems for recreational and residential areas; and has observed the construction and siting of the various required elements.

His talents encompass a broad range of professional services. Services included feasibility studies, budget analysis, programming, full architectural services, environmental assessment, historic certification, adaptive re-use, and space conversions.

9. All work by firms or Joint-Venture members currently being performed directly for Federal agencies.

[illegible]

10. Use this space to provide any additional information or description of resources (including any computer design capabilities supporting your firm's qualifications for the proposed project.

Architects & Associated Designers, Inc. and its' Team of consultants is pleased to submit its' credentials for the Harborwalk: Phase 1, Signage System project. A&AD has worked on other projects for the City of Boston, and we are eager to continue working for the City through your office. Our team's project experience and professional credentials qualify us to be considered for this contract. We have proven ourselves to be a dedicated group with extensive experience in the types of services required to provide a concise signage system to direct native Bostonians and visitors to our City around the proposed Harborwalk. The City would receive value and quality service should this contract be awarded to Architects & Associated Designers, Inc. and its consultant team.

A&AD and its consultants have provided like services for other clients: design of clear, concise, attractive signs; siting of such signs to maximize their effectiveness; working with various city and private agencies to achieve the required results: code compliance, documentation, and pedestrian access.

Our Team has worked successfully together on various projects, and we attribute our success to the many years of experience and high level of competence inherent in each firm. However, as Prime, A&AD takes its' responsibilities as Project Directors and Managers seriously. Effective quality assurance can only be attained by having one person ultimately responsible for releasing the project to the Client. Robert Stickles, AIA, Principal of A&AD has the knowledge and experience required to coordinate the disciplines of each project. We will follow our tradition of assigning one Architect, directly under Mr. Stickles, to be responsible for the coordination of work and correspondence between the Client and Consultant offices. This method assures the City of a high level of quality in both design and construction.

The following highlights our qualifications:

1. The entire team is located in Boston; A&AD maintains its office along the Fort Point Channel section of Harborwalk. Communications and document exchange can be done effectively via a network of FAX machines, telephone modems where applicable, and by express mail or courier.
2. Our Team's present workload and our future anticipated project load for 1989 is such that we could give top priority to Harborwalk Phase 1. Our projects with the City are 80% of the way through Construction Administration and will begin to wind down ever further. We are capable and eager to take on another project for the City. A high energy level along with relevant experience and a sincere desire to continue helping to develop Boston promise to provide the BRA and DEM with a successful project. We are committed to having the senior level people listed in this SF 255 available and working on this assignment. Our offices are geared toward having multiple projects on our boards in various stages of design and construction, and we are poised and ready to begin work immediately upon authorization to proceed. We are presently increasing our staff to include two more senior, registered architects.
3. A&AD and its consultants are all able to react quickly to the needs, demands, and eventual project changes of the City. We are realistic about time commitments and make every possible effort to schedule ample time to conduct the essential project design requirements without unnecessary pressure. Project meetings will be held at the onset of each project and throughout the critical design development phase between the City and our entire Team to ensure a clear understanding of the project.
4. Each person assigned to this project is professionally trained and/or registered in respect to their particular field. All team members continue to expand their professional skills by keeping apprised of current, state-of-the-art methods by attending seminars, lectures, and university courses.
5. To date, A&AD has successfully completed two major projects for the PFD; and a number of projects under NDEA, (now PFD). Also, eleven projects for the VA, the FAA, Massachusetts Aeronautics Commission, US Postal Service, USAF (Pease AFB), and local city, town, and municipal governments in MA, VT, NH, and ME.

We are very familiar with the City, the Waterfront, and its components. We have established a good working relationship with various City agencies, and we look forward to continue to service the design needs of the City. We have on record many library copies of City of Boston standard specifications and have successfully Publically Bid projects under Chapter 149, Filed Sub-bids.

Project Descriptions

Most of our projects have included some type of signage design and implementation. All signage has been developed to be unique to the structure or business it denotes. When necessary, signage has been developed in context with that existing.

Kiosk/Newsstand, Boston, MA

- The Kiosk was designed to provide newsstand services to the occupants of the Federal Reserve Bank. Sales proceeds were used to support the Massachusetts Commission for the Blind, the non-profit organization in charge of the vending operation.

The Kiosk, while functional, also existed as a major piece of sculpture. An important design criterion was to relate the piece not only to the space itself, but to the building's waterfront location. The Kiosk was designed as reminiscent of a sleek yacht - by virtue of its configuration and the nature of materials used. A sail-like canopy, triangular in form and composed of brightly-colored cloth pieces, was used as a covering for the newsstand base. By day it was raised to expose the vending services, by night the canopy dropped, concealing the bases daytime function.

The backdrop of the newsstand was clad in a silvery laminated material, resonating the shiny aluminum used to cover the building's exterior. A strip of neon floated across its face, creating a soft glow of color. Lighting also came in the form of concealed fixtures at the newsstand counter. When the Kiosk was closed, a glow emanated from within, the sight of which was clearly visible through the glass facade of the building to passersby.

The Tobacconist, Boston, MA

- This counter and display space is a permanent structure in Faneuil Hall's busy Bull Market. It was designed to make maximum use of the allotted space and to be durable and easy to maintain.

Abraham School, Boston, MA

- Landscape design of approximately 10,000sf for complete redevelopment of space around existing building. Included walkways, parking lots, tot lots, shady viewing areas, seating and plantings.

ASTRA Guardhouse, Westborough, MA

- A&AD renovated the existing main guardhouse to redefine space use and to upgrade and modernize the interior of the facility. By grouping activities and reworking the space plan, we were able to increase the efficiency of operations. The project included new signage both inside and outside the facility in keeping with existing signage at the campus.

Corporate Identity Program, The Keliher Group, Boston, MA

- Graphic design and color selection of corporate logo and heading for letterhead, envelopes, and business cards.

Project Descriptions continued

Corporate Identity Program, Richard Rigoli, Co., Inc., Waltham, MA

- Graphic design and color selection of corporate logo and heading for letterhead, envelopes, and business cards.

Memorial to the Holocaust, Milwaukee, WI

- Developed sponsors concept into working drawings for design and construction of a living/teaching memorial that serves as an outdoor classroom for Jewish Community Center. Each piece of the memorial was sculpted separately and then assembled in a semi-circle at the site. Our drawings received high praise from General Contractor and sculptor who worked from them for their completeness and conciseness.

Congress Square Clock Tower, Portland, ME

- A&AD was commissioned to design this tower as part of Portland's revitalization, and to work with Dufresne-Henry, Inc. of Vermont on the architectural aspects of the redesign of Congress Square. Public participation was included at each design stage to gather input regarding the structure.

The clockworks were a gift to the City of Portland, and the pavilion is a display case designed to achieve the greatest visibility. The 14 foot high tower is partially below ground level. A ramped walkway descends into this submerged area, so that people can walk down and view the clockworks from close-up. At night, through the use of lighting, the Tower glows and becomes a focal point in the Plaza.

The brick cornered tower with its pyramid roof repeats the materials and shapes found in the historical houses near the square making this unique oversized clock the centerpiece of the square while its structure remains completely compatible with its neighborhood.

Ontario Masterplan, Ontario, CA

- As consultant to Matrix Development in Upland, CA, A&AD was responsible for the Masterplanning of a 20 block area targeted for a major rejuvenation. Included in the plans were office buildings, retail centers, recreation and entertainment facilities, parking, and a continuing life care facility. A cohesive strategy for land identification and acquisition, and design implementation was developed. Also planned was a system for informing visitors and residents as to their whereabouts, and the locations of the various sites.

Knightville Millcreek Masterplan, So. Portland, ME

- This project included the review and mapping of 5,000 houses in the South Portland area, over 90 square miles, to produce 10' by 14' map of the area detailing existing conditions for future improvements funded by HUD block grants. The intent of the study was to document the various facade types and to bring an element of continuity to the neighborhood upon improvements.

Master Paint Plan, Pease Air Force Base, Portsmouth, NH

- Conducted a review of existing facilities and their functions to develop a Master Paint Plan designed to be implemented over a ten year period.

Project Descriptions continued

Anna's Fried Dough, Boston, MA

- A&AD was hired to design a program for upgrading the stall at the Faneuil Hall Marketplace and to assist in streamlining it's operation. The modifications were initially short-term, utilizing signage and low-cost materials to improve the existing exterior, and reorganization behind the counter to allow for a smoother cycle of production. We developed a prototype Anna's Fried Dough for all future installations, consisting of a basic parti which could be altered to suit the flavor and context of each location. The prototype did not progress beyond design development.
